Mark Jerome Castillo Gomez

AI & TECHNICAL PRODUCT MANAGER | AIoT, DIGITAL PLATFORMS & SYSTEMS INTEGRATION

mjerome.gomez@gmail.com • linkedin.com/in/romemcg • markgomez.vercel.app
Location: Dubai, UAE

PROFESSIONAL SUMMARY

Product and technology professional with 6 years of experience across enterprise SaaS, AIoT and IoT platforms, digital twins, smart-city and connected-community solutions, systems integration and technical delivery. Builds AI-enabled products end to end, including LLM features with guardrails that keep outputs grounded in verified data, scheduled AI agents and AI-assisted prototypes. Translates business, operator and stakeholder needs into product vision, roadmaps, prioritised backlogs, requirements, user stories, acceptance criteria, KPIs and delivery plans. Experienced coordinating government and enterprise stakeholders, consultants, vendors, system integrators, engineering, QA, ICT and operations teams through solution design, testing, UAT, release readiness and adoption. MBA with Distinction, Certified Scrum Product Owner and licensed Electronics Engineer.

30% monitoring efficiency gain (Aldar)

40% faster infrastructure failure response (Aldar)

25% lower energy costs (Aldar)

15% platform adoption growth (Disrupt-X)

CORE EXPERTISE

AI: AI product strategy • LLM feature design, grounding and guardrails • AI agents and workflow automation • Human-in-the-loop verification • AI-assisted prototyping
Product and delivery: Product strategy, vision and roadmap • Use-case discovery and prioritisation • Backlog management • PRDs, user stories and acceptance criteria • Stakeholder and operator workshops • Government, vendor and systems-integrator coordination • APIs, IoT, AIoT, digital twins, BMS and data flows • Solution architecture and integration requirements • UAT and release planning • Risk, dependency and change control • Product KPIs, benefits tracking and Power BI reporting • Adoption and continuous improvement

PROFESSIONAL EXPERIENCE

TERMINUS GROUP · Dubai, UAE

Oct 2025 – Aug 2026

Product & Presales Manager, AIoT & Smart City Platforms

- Moved from Aldar's client-side smart-city function to Terminus's technology-vendor team, continuing Aldar-linked smart-home and connected-community initiatives while shaping wider command-center and digital-twin capabilities.
- Led discovery and solution definition by converting operator, business and technical needs into PRDs, prioritised use cases, product requirements, system flows, acceptance criteria and delivery inputs across device, API, data, platform and application layers.
- Defined integration and data-flow requirements across IoT devices, gateways, APIs, data services, digital twins, dashboards and applications supporting city operations, asset intelligence, smart home, smart destination, municipal infrastructure and ESG use cases.
- Coordinated product, solution architecture, engineering, OEMs, vendors and implementation teams to validate feasibility, resolve integration dependencies and prepare solutions for testing, UAT, demonstrations and release readiness.
- Supported portfolio development for Aldar smart-home initiatives, the Terminus AI City Operating System (TacOS) and IoC command-center solutions, Dubai Municipality wastewater management, Miral Smart Destination and Al Wasl Smart Home; maintained requirements, decisions, assumptions, risks and solution documentation.

ALDAR PROPERTIES PJSC · Abu Dhabi, UAE

Oct 2024 – Oct 2025

Product Owner & Smart City Lead, Connected Communities

- Owned requirements, prioritisation and delivery coordination for connected-community and command-center capabilities across Saadiyat, Mamsha and The Grove, supporting an AED 30M+ portfolio spanning thousands of residential units.
- Defined use cases and roadmap inputs across smart home, mobility, parking, building intelligence, the Harbour resident application, predictive maintenance and Command & Control Centre capabilities based on resident, operator, asset-management, ICT and sustainability needs.
- Developed a reusable Smart City Solution Blueprint with use cases, vendor checklist, scoring criteria and impact framework, reducing repeated planning work and shortening solution evaluation and finalisation cycles by weeks to months.
- Used operational and platform data to drive a **30% improvement in monitoring efficiency**, **40% faster response to infrastructure failures** and a **25% reduction in energy costs** across connected-community assets.

- Coordinated integration requirements across IoT devices, BMS and building systems, digital/BIM core, APIs and enterprise platforms with Siemens, ID Cube, Parkonic, consultants and system integrators, covering interfaces, data access, dependencies, cybersecurity, testing and acceptance.
- Managed risks, issues, dependencies, scope changes, vendor deliverables, budget lines and VO/VOC/VC reviews; prepared executive status reporting and maintained the client-side requirements later continued through Terminus vendor delivery.

DISRUPT-X DMCC · Dubai, UAE — Mar 2023 – Oct 2024

Product Manager, IoT SaaS & City Operations Platforms

Promoted from Product Engineer within 6 months

- Managed roadmap and backlog inputs across environmental monitoring, infrastructure management, fleet and asset monitoring, smart parking, energy optimisation, marketplace, CMS and partner-management capabilities deployed across the UAE, Saudi Arabia and Oman.
- Translated customer interviews, operator feedback, support data and engineering inputs into product requirements, workflows, user stories, acceptance criteria, test scenarios and prioritised improvements.
- Managed end-to-end integration requirements and data flows across sensors, gateways, LoRaWAN, NB-IoT, Sigfox, BLE, Wi-Fi, cellular networks, APIs, cloud services, dashboards and customer applications.
- Coordinated engineering, QA, delivery teams, technology partners and customers through requirements, sprint planning, integration, testing, issue resolution, UAT and release readiness, achieving **above 95% acceptance** across documented scenarios.
- Used operational and product data to inform roadmap and backlog decisions, supporting approximately **15% growth in platform adoption**.

SAMSUNG ELECTRO-MECHANICS · Philippines — Jul 2020 – Feb 2023

Product Development Manager, R&D & Engineering Programmes

Promoted from Product Development Engineer (Jul 2020 – Feb 2022)

- Coordinated cross-functional product-development programmes with R&D, engineering, production, quality, suppliers and Samsung headquarters in South Korea, translating requirements into development activities, engineering trials, test plans and readiness decisions.
- Used structured engineering, test, production and quality data to investigate defects and failure mechanisms, identify root causes, prioritise corrective actions and support continuous product and process improvement.
- Maintained technical specifications, test evidence, engineering findings, change records and development documentation to support traceability, stakeholder reviews, reliability validation and production readiness.
- Supported improvements that reduced production cycle time and material waste by approximately **18%**; received Best Practitioner, Most Outstanding Employee (Plating R&D) and Most Improved Process awards.

AI PRODUCTS AND BUILDS

- **CareerOS (AI CV engine):** designed a local-first desktop app (Tauri, React, TypeScript, Rust, SQLite) in which the LLM only selects and orders human-verified facts; the no-invention rule is enforced in the database rather than the prompt, and the API key stays in the system keychain.
- **Gulf Hiring Radar:** defined a scheduled AI agent that finds and rates new UAE and Oman openings every weekday against set filters, with explicit limits on autonomous actions (it never applies or messages anyone).
- **LIFE OS:** scoped a broad brief into an eight-module planning app MVP (Next.js, TypeScript, SQLite, automated tests) built with AI-assisted development; public demo on fictional data.
- **Smart City Intelligence Hub:** built a Next.js, React and TypeScript platform modelling 22+ IoT protocols and 18 solution architectures across device, connectivity, platform, data and application layers.

EDUCATION AND LICENCES

- **Master of Business Administration**, with Distinction, Philippine Christian University, 2025
- **Bachelor of Science in Electronics Engineering**, University of Batangas, 2020
- **Licences (PRC Philippines):** Registered Electronics Engineer, 2022 • Registered Electronics Technician, 2022
- **Certified Scrum Product Owner**, Scrum Alliance, 2026

CERTIFICATIONS, TOOLS AND TECHNOLOGIES

Certifications: AI in Product Management (Pendo) • Introduction to Large Language Models (PMI) • Smart Cities: Management of Smart Urban Infrastructures (EPFL) • Product Roadmapping (Product School) • LoRaWAN Academy • Cisco IoT and Digital Transformation • Milesight Smart HVAC Solution Specialist • Power BI Dashboards • PMI Organizational Change

AI tools: Claude, Claude Code, ChatGPT, Gemini, Cursor, LLM APIs. **Tools:** Jira, Confluence, MS Project, SharePoint, Excel, PowerPoint, Power BI, Figma, Miro. **Technologies:** LLMs and AI agents, enterprise SaaS, APIs, digital twins, systems integration, LoRaWAN, NB-IoT, Sigfox, BLE, Wi-Fi, cellular.
